Energy / LPM / (Timer)

- Low power modes vary greatly

  - Modes & periphery

- Initial support for pm on atmega1284p

- Initial support for pm on nucleo-l476

  - Got 9 modes (run, sleep, lp run, lp sleep, stop0/1/2, standby, shutdown)

  - Currently stuck in … standby?

- Not all low-power modes block MCU

  - State required … or a different API?

- Can we build a unified test case?
